PROFESSIONAL PROFILE

Experienced Software Engineer with over 10 years in backend development, cloud infrastructure, and DevOps. Passionate about building scalable solutions, optimizing performance, and automating infrastructure. Proficient in Ruby, Kubernetes, AWS, and CI/CD pipelines, with a strong focus on high-performance applications and infrastructure reliability.

EXPERIENCE

Software Engineer

Oct 2024 - Present

RD Station, Brasil

RD Station is a leading provider of marketing and sales technology solutions in Brazil. As a Software Engineer, I develop and maintain backend services and infrastructure for a large-scale data platform responsible for unifying data across the company's core applications and supporting millions of daily API requests.

- Develop and maintain backend services focused on data and analytics.
- Build APIs and backend features using Ruby and Ruby on Rails.
- Integrate Google Cloud Platform services, including Pub/Sub, BigQuery, and Cloud SQL.
- Create monitoring dashboards and observability solutions using Datadog.
- Develop services for access provisioning and permission management.
- Perform database maintenance and data modeling using Spanner.
- Produce technical design documents to define architecture, implementation plans, and task breakdowns for new API features

Software Engineer

Mar/2021 ~ Aug/2023

WOVN Inc. Tokyo, Japan

WOVN is a company compromised to leverage engineering and localization solutions with a global impact. My role as Software Engineer is to develop and maintain services designed for localization.

- Worked with a team composed of different nationalities
- Performance evaluation of services, queries, and third-party integrations
- Development of new features in APIs using Ruby / Ruby on Rails
- Infrastructure and performance monitoring using Cloudwatch, Prometheus, Kibana, Datadog and others
- Create new CI/CD jobs using CircleCI for E2E tests using Cypress

DevOps Engineer

Jul/2019 ~ Mar/2021

Rock Content. Belo Horizonte, Brazil

Started a career path in Rock Stage, a Wordpress platform built for business and marketing professionals. Joined the team to collaborate with infrastructure planning and development of new features.

- AWS solutions like S3, EC2, RDS, Lambda, SQS, ECR, Cloudwatch and others Administration and maintenance of clusters containing hundreds of EC2 instances Kubernetes cluster administration
- Experience deploying and migrating applications to containers and Kubernetes cluster Development of services using different technologies like: Go, Ruby, Typescript, NodeJS, Docker and others
- Infrastructure and performance monitoring using Cloudwatch, Prometheus, Alert manager, Grafana and other services

Senior Full-Stack Web Developer

Mar/2016 ~ Jun/2019

Rock Content. Belo Horizonte, Brazil

Development of platforms designed for article writing using technologies like Ruby, Ruby on Rails, Sidekiq, VueJS, AWS, Heroku, Firebase and others.

- Designed the architecture of a content creation platform, with that customers can dynamically configure their content marketing production process
- Worked with third party service providers and application integrations to meet the requirements of language tools like internationalization (i18n), plagiarism report tools, keyword analysis tools and others
- Development of features for the Content Marketing Platforms produced by Rock Content AWS and Heroku Infrastructure application management
- Linux servers and AWS services administration of EC2, Elastic Beanstalk and others Event based services integrations to provide data analysis
- Provided reports for finance, sales, customer success and other teams custom metrics
